

Optimization Techniques

Section 1

M. Fatih Amasyalı

Mehmet Fatih AMASYALI Optimization Techniques Lecture Notes

YILDIZ TECHNICAL UNIVERSITY COMPUTER ENG. DEPT.

What is optimization?

(mathematical) optimization problem

$$\begin{array}{ll} \text{minimize} & f_0(x) \\ \text{subject to} & f_i(x) \leq b_i, \quad i = 1, \dots, m \end{array}$$

- $x = (x_1, \dots, x_n)$: optimization variables
- $f_0 : \mathbb{R}^n \rightarrow \mathbb{R}$: objective function
- $f_i : \mathbb{R}^n \rightarrow \mathbb{R}, i = 1, \dots, m$: constraint functions

optimal solution x^* has smallest value of f_0 among all vectors that satisfy the constraints

Mehmet Fatih AMASYALI Optimization Techniques Lecture Notes

YILDIZ TECHNICAL UNIVERSITY COMPUTER ENG. DEPT.

Optimization example (Constraint Optimization)

- Find the largest possible rectangular area you can enclose, assuming you have L meters of fencing.
- $f(x) = x * ((L/2) - x)$

Optimization examples

portfolio optimization

- variables: amounts invested in different assets
- constraints: budget, max./min. investment per asset, minimum return
- objective: overall risk or return variance

data fitting

- variables: model parameters
- constraints: prior information, parameter limits
- objective: measure of misfit or prediction error

Portfolio Optimization

Optimization Techniques

- Derivative Techniques
 - Gradient descent
 - Newton Raphson
 - LM
 - BFGS
- Non Derivative Techniques
 - Hill climbing
 - Genetic algorithms
 - Simulated annealing

Linear, nonlinear, convex functions

- f is a function $\mathbb{R}^n \rightarrow \mathbb{R}$
- For every $x_1, x_2 \in \mathbb{R}^n$ (x_1, x_2 are n dimensional points)
- f is linear if
 - $f(x_1+x_2)=f(x_1)+f(x_2)$ and $f(r*x_1)=r*f(x_1)$
- $f(x)=2*x$ is linear and affine.
- $f(x)=2*x+3$ is affine but not linear.
- A linear function fixes the origin, whereas an affine function need not do so. An affine function is the composition of a linear function with a translation.
- $f(x)=3$ is constant, but not linear.

Linear, nonlinear, convex functions

- f is convex if

$$\lambda f(x_1) + \beta f(x_2) \geq f(\lambda x_1 + \beta x_2), \text{ where } \lambda + \beta = 1, \lambda \geq 0, \beta \geq 0$$

Mehmet Fatih AMASYALI Optimization Techniques Lecture Notes

YILDIZ TECHNICAL UNIVERSITY COMPUTER ENG. DEPT.

Linear, nonlinear, convex functions

- $f(x_1) = 3x_1 + 3$
- $f(x_1, x_2) = ax_1 + bx_2 + c$
- $f(x_1, x_2) = x_2^2 + x_1^2 + 3x_1$
- $f(x) = \sin(x)$ is convex when $x \in [?, ?]$
- Concave?

Mehmet Fatih AMASYALI Optimization Techniques Lecture Notes

YILDIZ TECHNICAL UNIVERSITY COMPUTER ENG. DEPT.

How to find minimum point? Commonsense

- Use derivative
- Go to the negative direction of derivative
- But, step size?

General Algorithm

- initial guess
- While (improvement is significant) and (maximum number of iterations is not exceeded)
 - improve the result

Gradient Descent

- Using only derivative sign
- Using also magnitude of the derivative
- Effect of the step size
- Effect of the starting point
- Local minimum problem

Mehmet Fatih AMASYALI Optimization Techniques Lecture Notes

YILDIZ TECHNICAL UNIVERSITY COMPUTER ENG DEPT.

```
% The gradient descent algorithm with constant stepsize
% f(x)=x^2, with derivative f'(x)=2x

clear all;
close all;

% plot objective function
x=-5:0.01:5;
y=zeros(1,length(x));
for i=1:length(x)
    y(i)=x(i)^2;
end
plot(x,y);

x_old = 0;
x_new = -4.9;
% The algorithm starts at x=-4.9
eps = 0.05; % step size
precision = 0.00001; % stopping condition1
max_iter=200; % stopping condition2
Xs=zeros(1,max_iter);
Ys=zeros(1,max_iter);

i=1;
while abs(x_new - x_old) > precision && max_iter>=i
    Xs(i)=x_new;
    Ys(i)=x_new^2;
    hold on;
    plot(Xs(i),Ys(i),'r*');
    text(Xs(i),Ys(i),int2str(i));

    x_old = x_new;
    df= 2 * x_old;
    x_new = x_old - eps * sign(df); % gradient sign
    i=i+1;
end
figure;
plot(Xs(1:i-1));
xlabel('iteration');
ylabel('x values');

gradient_desc_1.m
```

Mehmet Fatih AMASYALI Optimization Techniques Lecture Notes

YILDIZ TECHNICAL UNIVERSITY COMPUTER ENG DEPT.

Result

- $f(x)=x^2$
- $f'(x)=2*x$
- Max_iter=200
- Constant step size =0.05
- Starting point=-4.9

Mehmet Fatih AMASYALI Optimization Techniques Lecture Notes

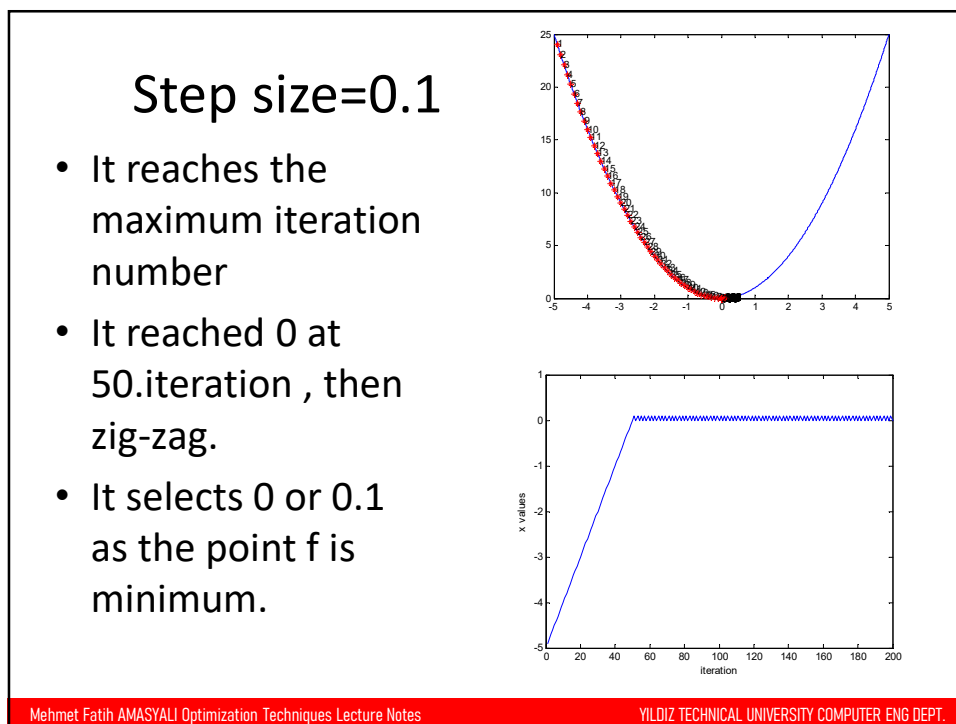

YILDIZ TECHNICAL UNIVERSITY COMPUTER ENG DEPT.

- It reaches the maximum iteration number
- It reached 0 at 100.iteration , then zig-zag.
- It selects 0 or 0.05 as the point f is minimum.

Mehmet Fatih AMASYALI Optimization Techniques Lecture Notes

YILDIZ TECHNICAL UNIVERSITY COMPUTER ENG DEPT.

Step size=0.01

- It reaches the maximum iteration number
- It does not reached to 0.
- It selects -2.91 as the minimum point.
- It will zig-zag.

Mehmet Fatih AMASYALI Optimization Techniques Lecture Notes

YILDIZ TECHNICAL UNIVERSITY COMPUTER ENG. DEPT.

Gradient Descent

- Using also the magnitude of the derivative
- $x_{\text{new}} = x_{\text{old}} - \text{eps} * df;$
- instead of $x_{\text{new}} = x_{\text{old}} - \text{eps} * \text{sign}(df);$
- Can we reduce the required number of iterations?

Mehmet Fatih AMASYALI Optimization Techniques Lecture Notes

YILDIZ TECHNICAL UNIVERSITY COMPUTER ENG. DEPT.

gradient_desc_2.m

- Step size=0.05
- Max_iter=200
- The number of iteration is 120.
- It does not zig-zag.
- It selects 0 ± 10^{-5} the point f is minimum.

Mehmet Fatih AMASYALI Optimization Techniques Lecture Notes

YILDIZ TECHNICAL UNIVERSITY COMPUTER ENG. DEPT.

gradient_desc_2.m

- Step size=0.1
- Max_iter=200
- The number of iteration is 60.
- It does not zig-zag.
- It selects 0 ± 10^{-5} the point f is minimum.

Mehmet Fatih AMASYALI Optimization Techniques Lecture Notes

YILDIZ TECHNICAL UNIVERSITY COMPUTER ENG. DEPT.

gradient_desc_2.m

- Step size=0.01
- Max_iter=200
- It reaches the maximum iteration number.
- It does not zig-zag.
- It selects 0 ± 10^{-2} as the point f is minimum.
- It requires the more iteration.

Mehmet Fatih AMASYALI Optimization Techniques Lecture Notes

YILDIZ TECHNICAL UNIVERSITY COMPUTER ENG DEPT.

gradient_desc_2.m

- Step size=0.7
- Max_iter=200
- The number of iteration is 16.
- It does not zig-zag.
- It selects 0 ± 10^{-5} the point f is minimum.

Mehmet Fatih AMASYALI Optimization Techniques Lecture Notes

YILDIZ TECHNICAL UNIVERSITY COMPUTER ENG DEPT.

gradient_desc_2.m

- Step size=0.99
- Max_iter=200
- It reached the maximum iteration number.
- It zig-zag, but zig-zag magnitude decreases.
- It selects 0 ± 10^{-1} the point f is minimum.
- It requires more iteration.

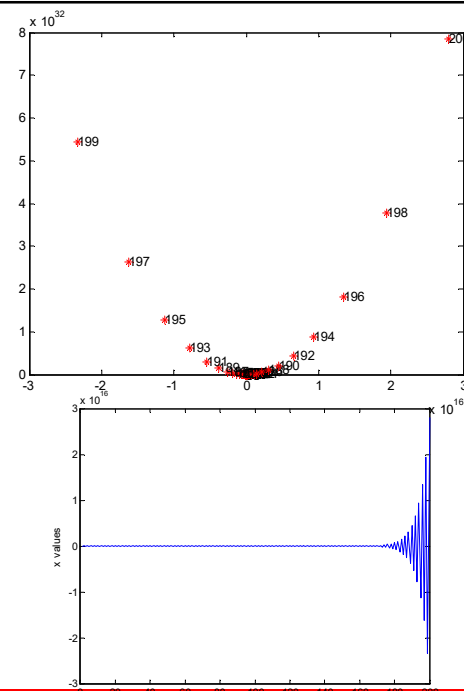

Mehmet Fatih AMASYALI Optimization Techniques Lecture Notes

YILDIZ TECHNICAL UNIVERSITY COMPUTER ENG DEPT.

gradient_desc_2.m

- Step size=1
- Max_iter=200
- It reached the maximum iteration number.
- It does not converge.

Mehmet Fatih AMASYALI Optimization Techniques Lecture Notes

YILDIZ TECHNICAL UNIVERSITY COMPUTER ENG DEPT.

Starting point matters?

- $f(x)=x^4-3x^3+2$ with derivative
 $f'(x)=4x^3-9x^2$
- It has two extreme points $x=0$, $x=9/4$
- gradient_desc_3.m

Mehmet Fatih AMASYALI Optimization Techniques Lecture Notes

YILDIZ TECHNICAL UNIVERSITY COMPUTER ENG DEPT.

Step size=0.01

Starting point=3.9

Starting point=-1.9

Mehmet Fatih AMASYALI Optimization Techniques Lecture Notes

YILDIZ TECHNICAL UNIVERSITY COMPUTER ENG DEPT.

- Step size=0.05 can handle plateau, but not guaranteed.
- Step size=0.1 is very big for this function, it does not converge

Mehmet Fatih AMASYALI Optimization Techniques Lecture Notes

YILDIZ TECHNICAL UNIVERSITY COMPUTER ENG. DEPT.

Gradient descent

- Static zig-zag (hopeless) vs. slow converge (with hope)
- Very Small step size \rightarrow slow converge, plateau problem
- Very big step size \rightarrow do not converge
- Big and small step sizes depend on the objective function.
