1. The number of unknowns $n = 3$.

$$\begin{aligned} x + y - z &= 2 \\ x + 2y + z &= 3 \\ x + y + (a^2 - 5)z &= a \end{aligned}$$

If the above linear system of equations has unique solution, then which of the followings is the set of all possible values for a ?

- a) $a = 2$ b) $a = \pm 2$ c) $a = -2$ d) $a = \pm 2$
e) There is no such a number a .

$$\begin{bmatrix} 1 & 1 & -1 & : & 2 \\ 1 & 2 & 1 & : & 3 \\ 1 & 1 & a^2 - 5 & : & a \end{bmatrix} \xrightarrow{\substack{r_2 \rightarrow r_2 - r_1 \\ r_3 \rightarrow r_3 - r_1}} \begin{bmatrix} 1 & 1 & -1 & : & 2 \\ 0 & 1 & -2 & : & 1 \\ 0 & 0 & a^2 - 4 & : & a - 2 \end{bmatrix}$$

If there is unique solution, then $\text{rank}(A) = \text{rank}(A:b)$

and $\text{rank} A = 3$.

$\Rightarrow 0 \ 0 \ a^2 - 4$ can not be zero row.

$\Rightarrow a^2 - 4 \neq 0 \Rightarrow a \neq \pm 2$.

2)

$$\begin{bmatrix} 4 & -2 & 7 \\ 8 & -3 & 10 \end{bmatrix} \xrightarrow{r_2 \rightarrow r_2 - r_1} \begin{bmatrix} 4 & -2 & 7 \\ 0 & 1 & -4 \end{bmatrix}$$

$$\xrightarrow{r_1 \rightarrow r_1 + 2r_2} \begin{bmatrix} 4 & 0 & -1 \\ 0 & 1 & -4 \end{bmatrix} \xrightarrow{r_1 \cdot \frac{1}{4}} \begin{bmatrix} 1 & 0 & -1/4 \\ 0 & 1 & -4 \end{bmatrix} \rightarrow \begin{aligned} x_1 - \frac{1}{4}x_3 &= 0 \\ x_2 - 4x_3 &= 0 \end{aligned}$$

2.

$$\begin{aligned} 4x_1 - 2x_2 + 7x_3 &= 0 \\ 8x_1 - 3x_2 + 10x_3 &= 0 \end{aligned}$$

Which of the followings is the solution of above homogeneous system of linear equations?

a) There exists only trivial (zero) solution.

b) $x_1 = \frac{1}{4}k, x_2 = 4k, x_3 = k, k \in \mathbb{R}$.

c) $x_1 = 4k, x_2 = \frac{1}{4}k, x_3 = k, k \in \mathbb{R}$.

d) $x_1 = k, x_2 = 4k, x_3 = k, k \in \mathbb{R}$.

e) The system is inconsistent.

3.

$$\begin{aligned} 2x_1 + 3x_2 + 7x_3 &= 3 \\ -2x_1 - 4x_3 &= 1 \\ x_1 + 2x_2 + 4x_3 &= 4 \end{aligned}$$

Which of the followings is true for above linear system of equations?

I. The system is inconsistent.

II. The system has infinite solutions.

III. The system has unique solution.

a) Only I b) Only II c) Only III d) I and III

e) None of them

$$\begin{bmatrix} 2 & 3 & 7 & : & 3 \\ -2 & 0 & -4 & : & 1 \\ 1 & 2 & 4 & : & 4 \end{bmatrix} \xrightarrow{r_1 \leftrightarrow r_3} \begin{bmatrix} 1 & 2 & 4 & : & 4 \\ -2 & 0 & -4 & : & 1 \\ 2 & 3 & 7 & : & 3 \end{bmatrix}$$

$$\xrightarrow{\substack{r_2 \rightarrow r_2 + 2r_1 \\ r_3 \rightarrow r_3 - 2r_1}} \begin{bmatrix} 1 & 2 & 4 & : & 4 \\ 0 & 4 & 4 & : & 9 \\ 0 & -1 & -1 & : & -5 \end{bmatrix}$$

$$\xrightarrow{r_3 \rightarrow r_3 + \frac{1}{4}r_2} \begin{bmatrix} 1 & 2 & 4 & : & 4 \\ 0 & 4 & 4 & : & 9 \\ 0 & 0 & 0 & : & -11/4 \end{bmatrix}$$

$\Rightarrow \text{rank} A = 3, \neq \text{rank}(A:b) = 4$
 \Rightarrow No solution (inconsistent)

$(n=3) - (\text{rank} A = 2) = 1$

\Rightarrow Infinite solutions depending on one parameter, say k .

Say $x_3 = k$. Then

$$x_1 = \frac{1}{4}k, x_2 = 4k, x_3 = k,$$

$k \in \mathbb{R}$
