

Input- Output

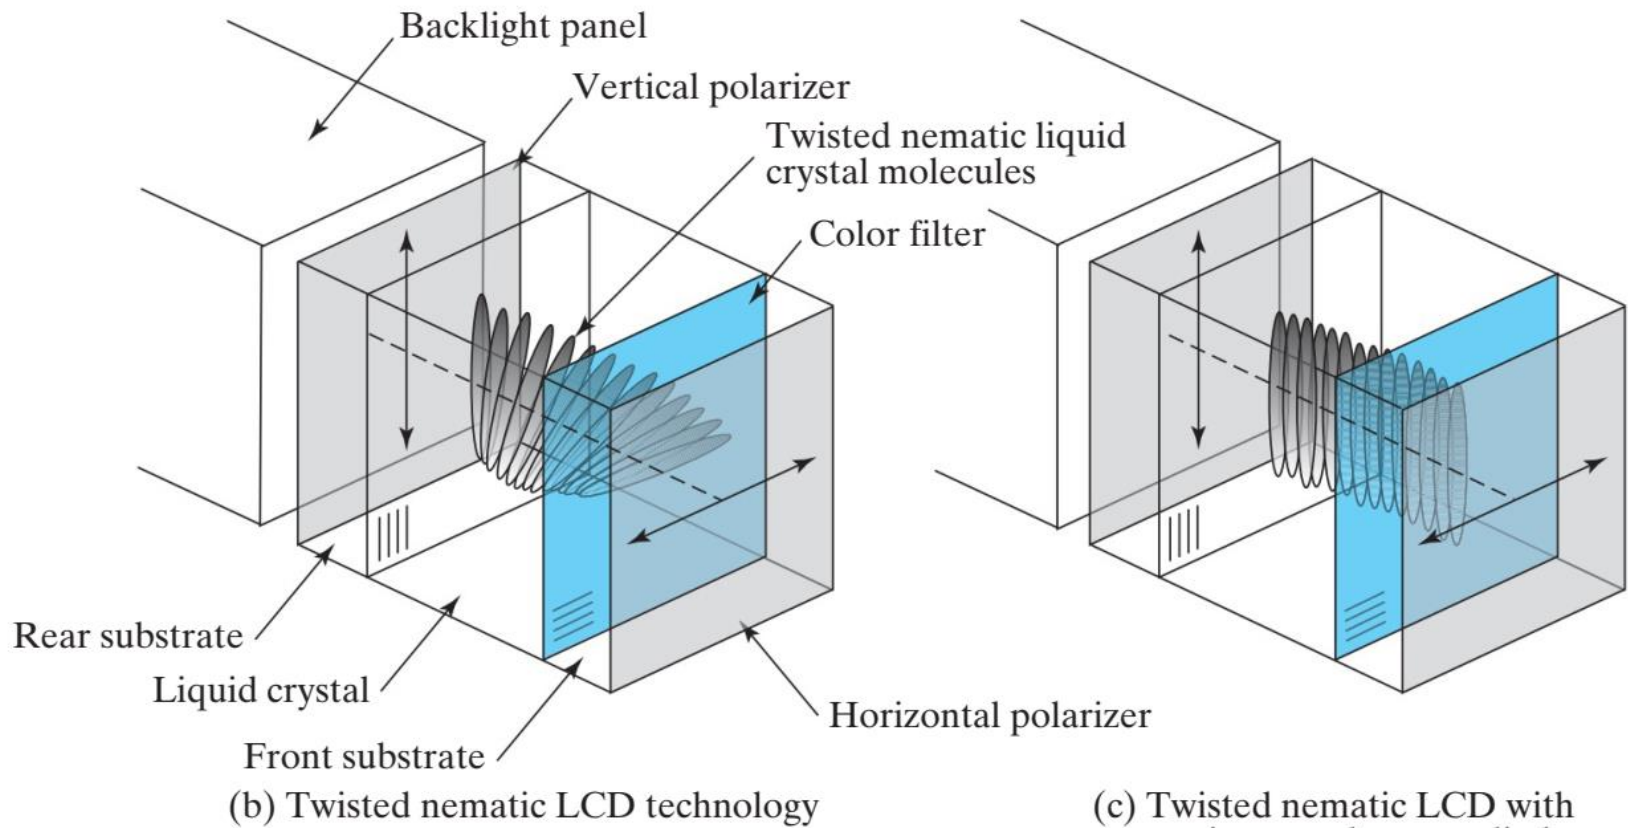

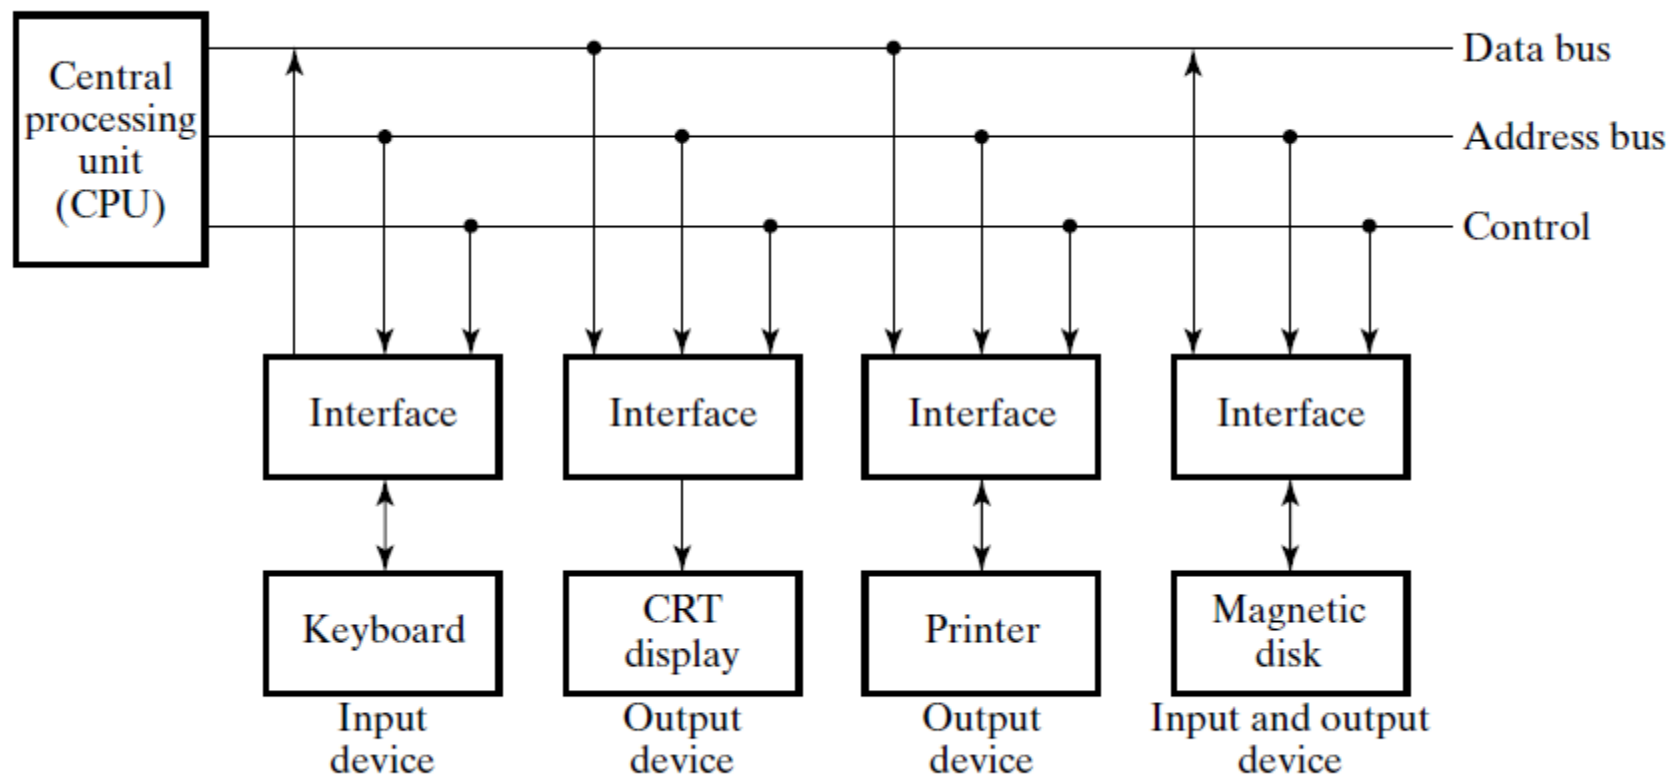

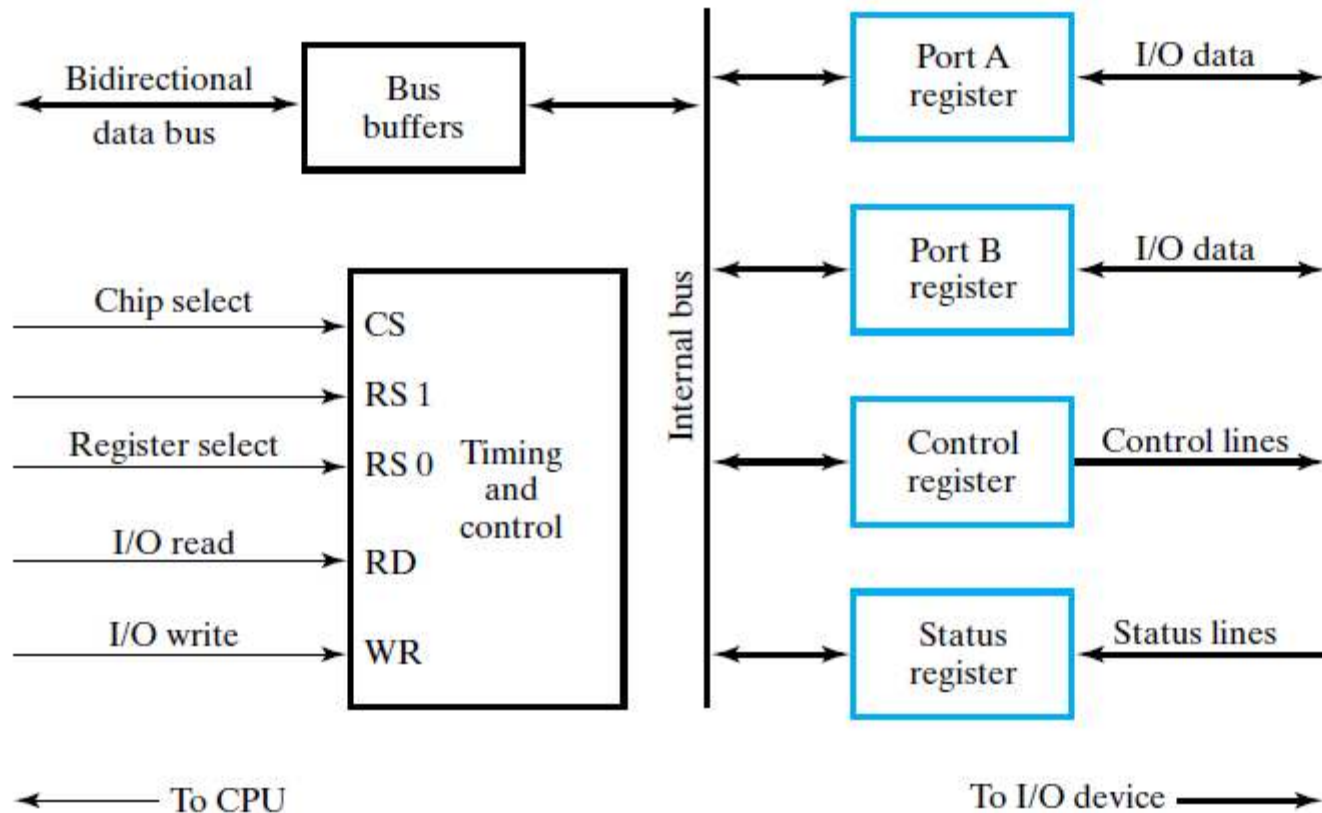

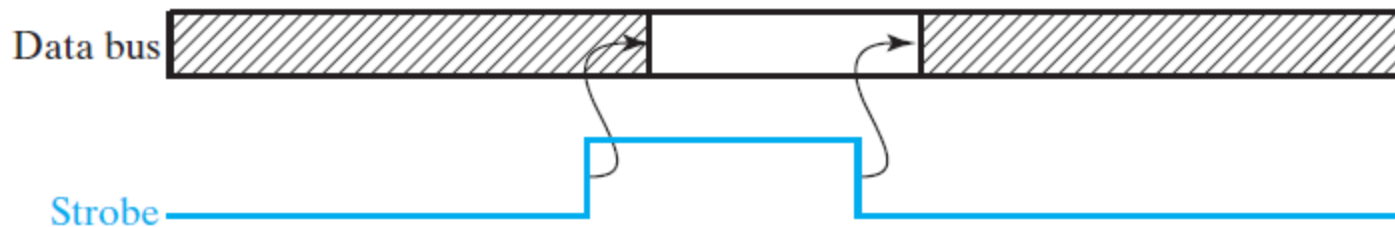

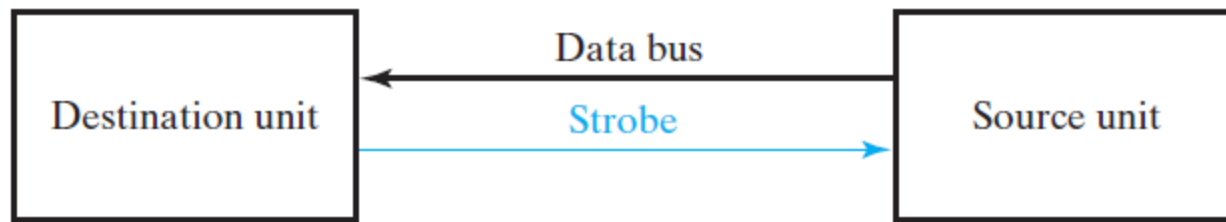

(a) LCD screen pixel

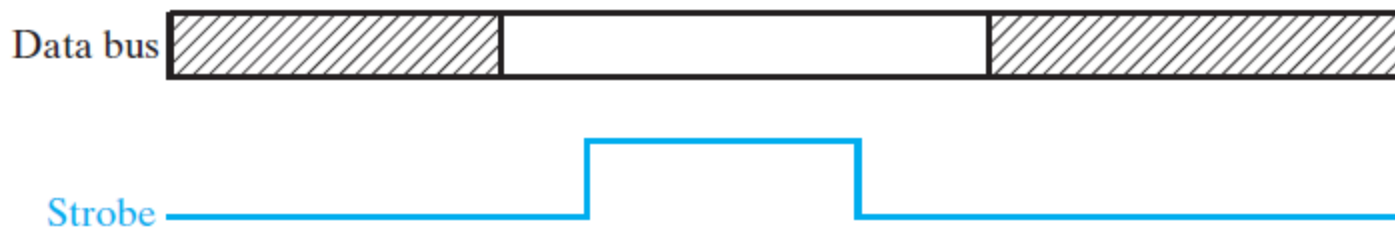

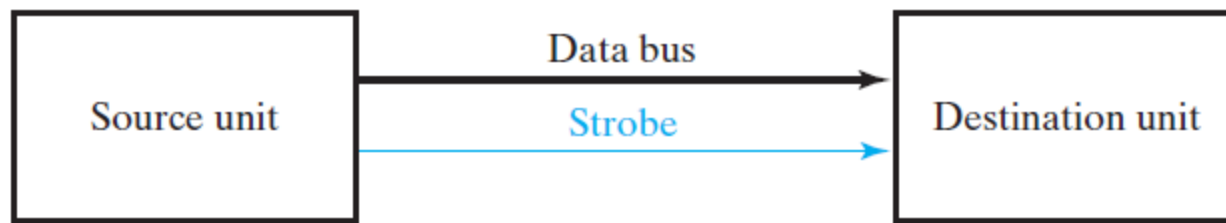

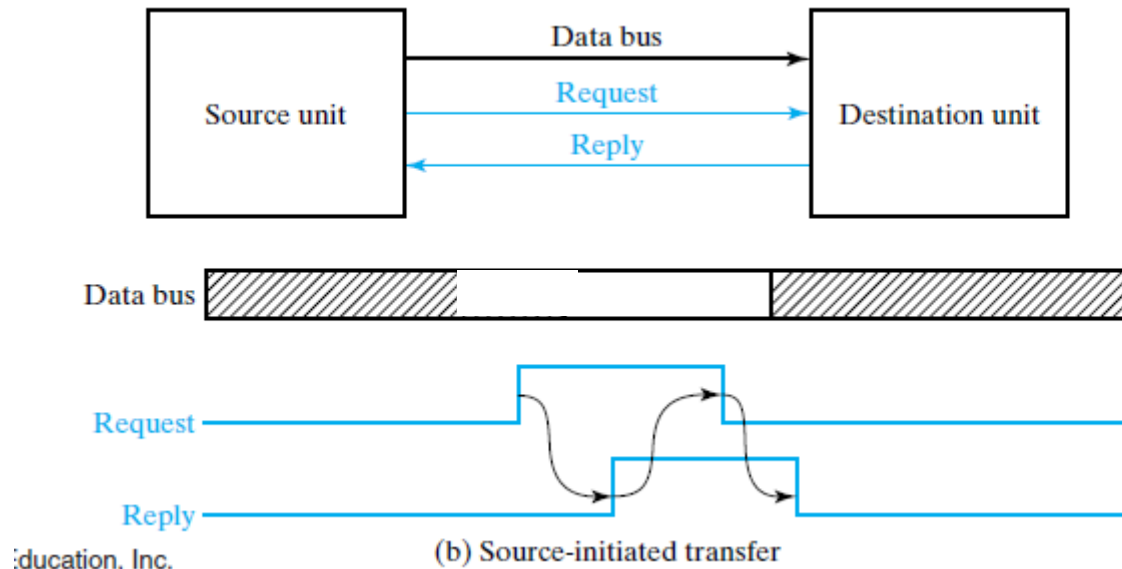

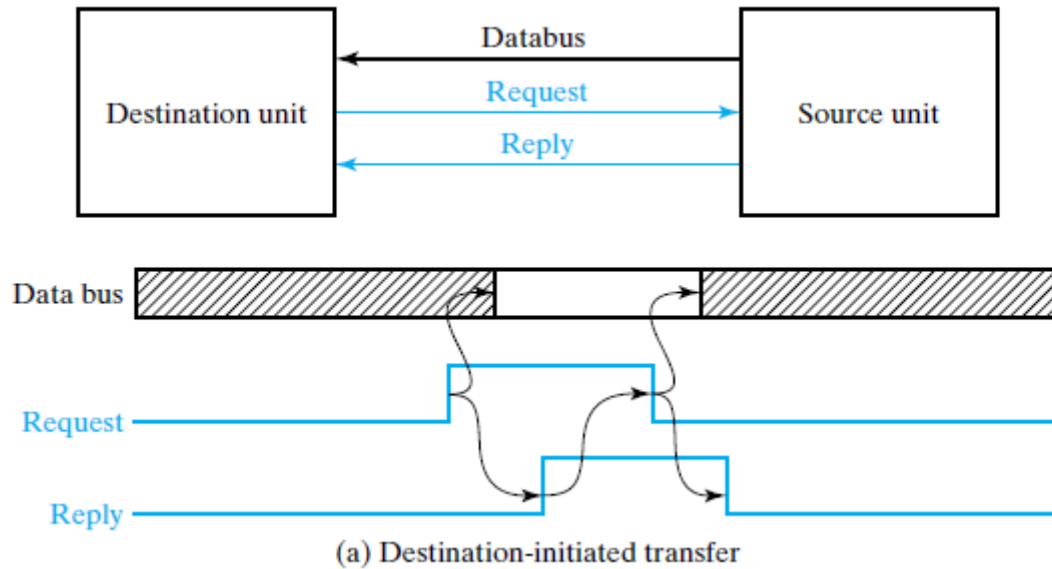

CS	RS1	RS0	Register selected
0	x	x	None: data bus in high-impedance state
1	0	0	Port A register
1	0	1	Port B register
1	1	0	Control register
1	1	1	Status register

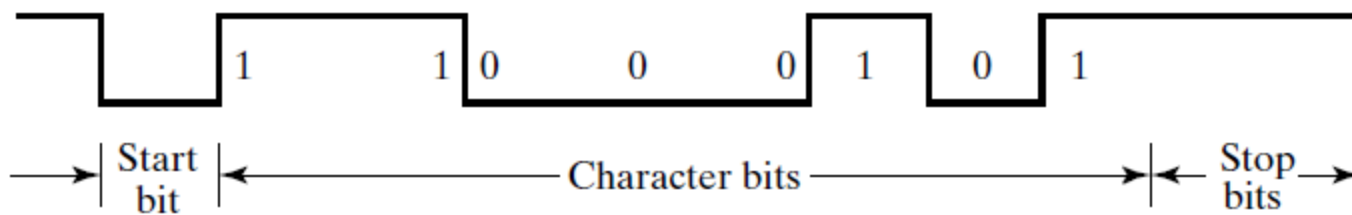

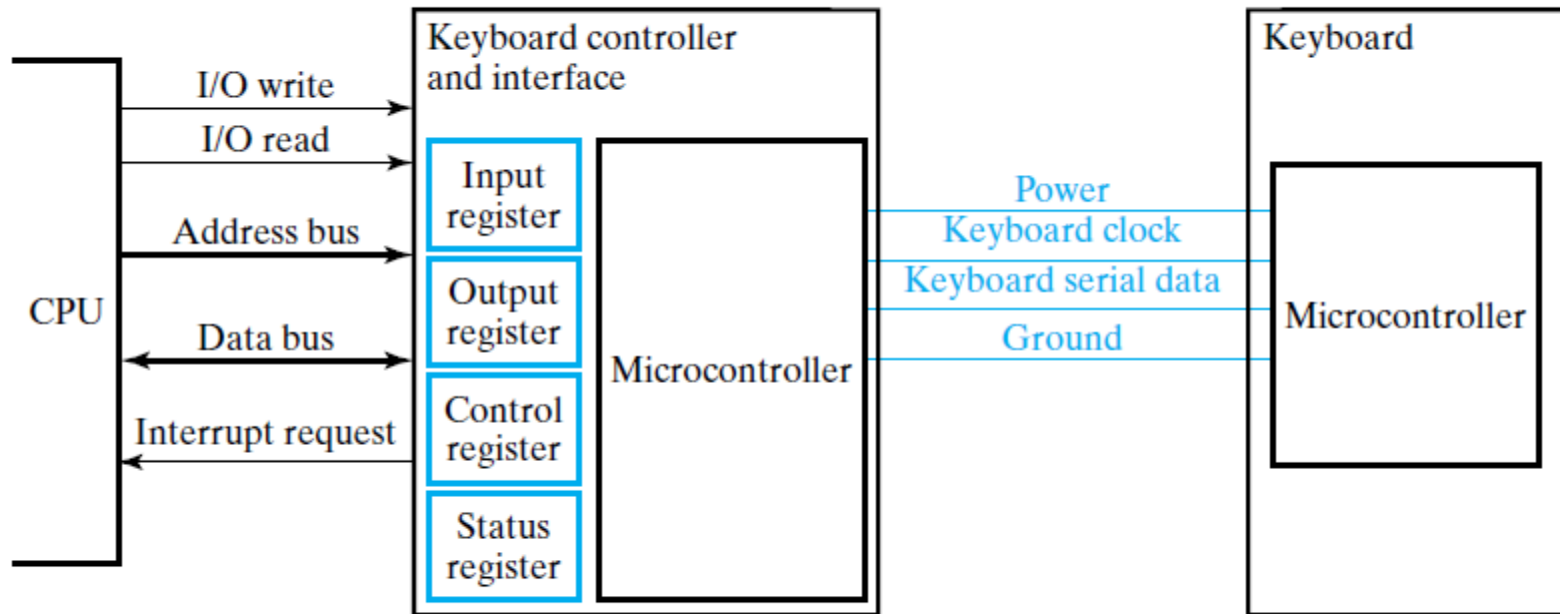

(a) Destination-initiated transfer

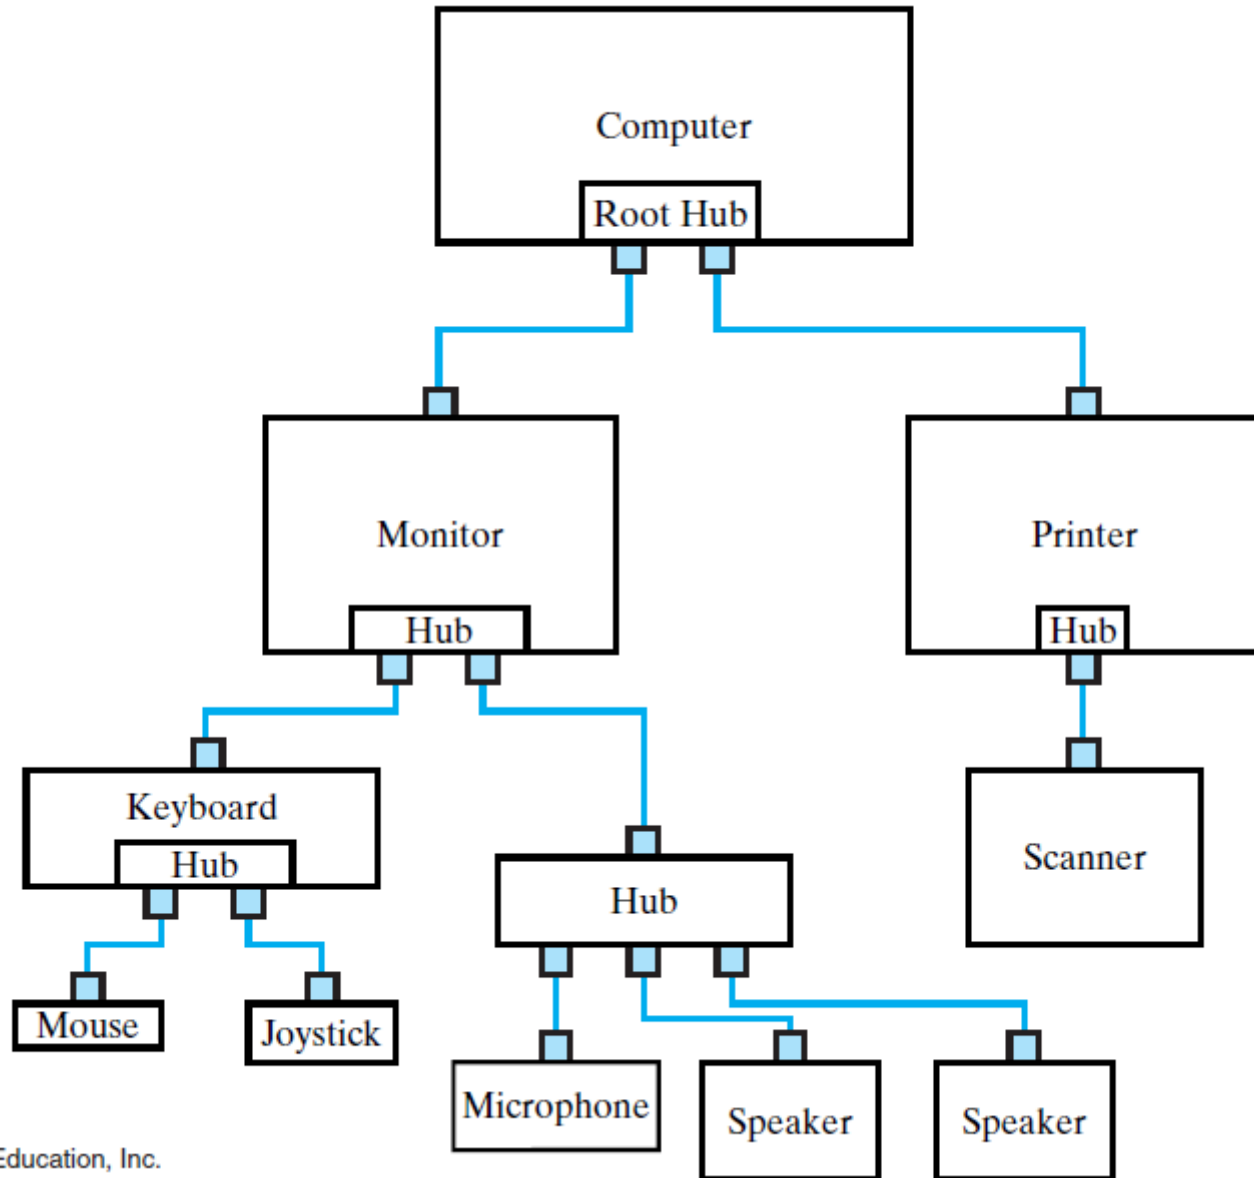

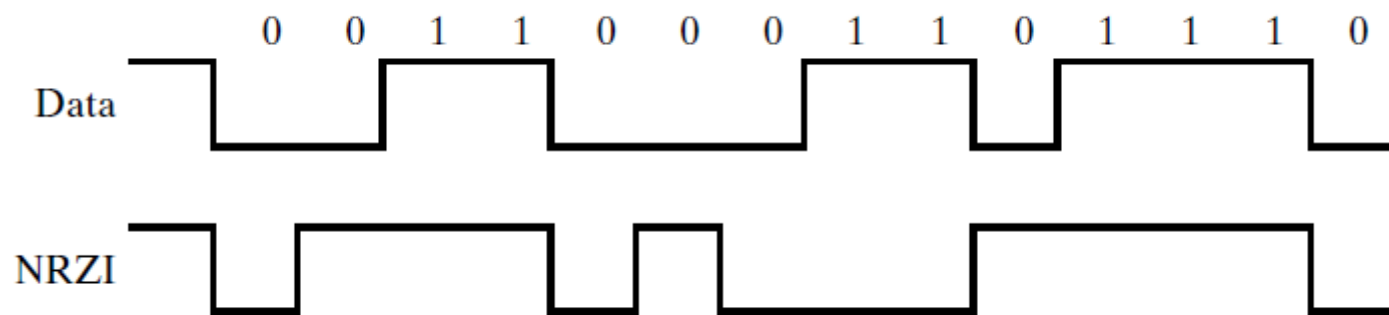

(b) Source-initiated transfer

SYNC	PID	Packet Specific Data	CRC	EOP
------	-----	----------------------	-----	-----

(a) General packet format

SYNC 8 bits	Type 4 bits 1001	Check 4 bits 0110	Device Address 7 bits	Endpoint Address 4 bits	CRC	EOP
----------------	------------------------	-------------------------	-----------------------------	-------------------------------	-----	-----

(b) Output packet

SYNC 8 bits	Type 4 bits 1100	Check 4 bits 0011	Data (Up to 1024 bytes)	CRC	EOP
----------------	------------------------	-------------------------	----------------------------	-----	-----

(c) Data packet (Data0 type)

SYNC 8 bits	Type 4 bits 0100	Check 4 bits 1011	EOP
----------------	------------------------	-------------------------	-----

(d) Handshake packet (Acknowledge type)
