

# Data Communication and Computer Network

## BLM3051

Dr. Öğr. Üyesi Furkan ÇAKMAK

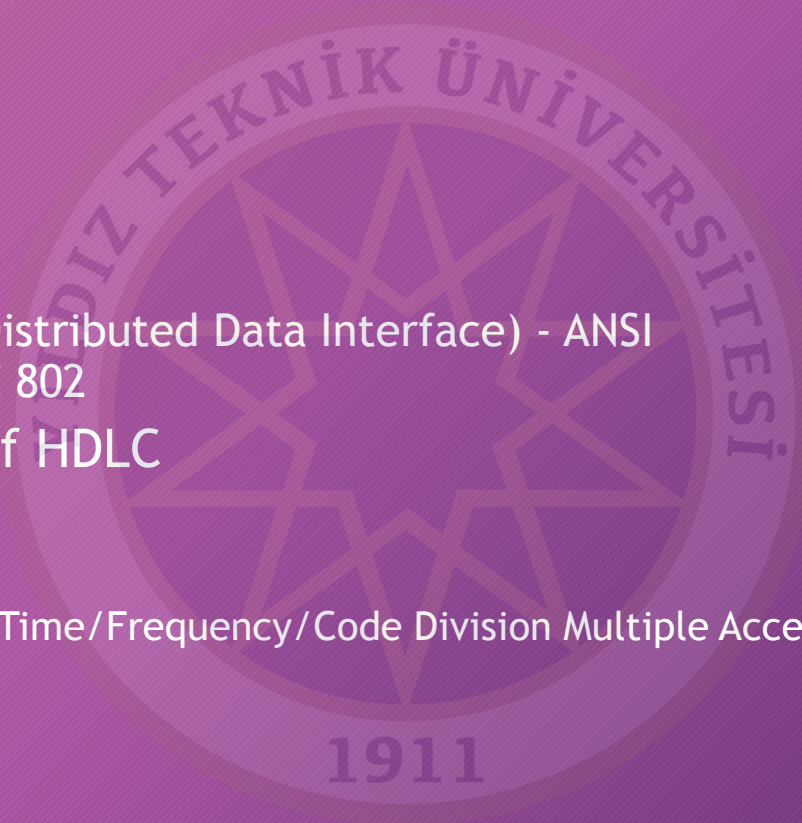

# Lecture Information Form - Weekly Subjects

Hafta	Tarih	Konular
1	20.02.2024	Introduction to Data Communication Standards Used on Data Communication, Architectural models
2	27.02.2024	OSI Reference Model , Layers and Their Functions, Signaling and Signal Encoding
3	05.03.2024	Parallel and Serial Transmission, Communication Media and Their Technical Specs., Multiplexing (TDM, FDM)
4	12.03.2024	Error Detection and Error Correction Techniques, Data Link Control Techniques, Flow Control
5	19.03.2024	Asynchronous and Synchronous Data Link Protocols (BSC, HDLC)
6	26.03.2024	LAN Technologies Continued, IEEE 802.4, 802.5, 802.11
7	02.04.2024	Connectionless and Connection Oriented Services, Switching
8	09.04.2024	Tatil - Ramazan Bayramı Arifesi
9	16.04.2024	1. Ara Sınav
10	23.04.2024	Tatil - 23 Nisan Ulusal Egemenlik ve Çocuk Bayramı
11	30.04.2024	Static and Dynamic Routing, Congestion in the Network Layer, Its Causes and Solutions
12	07.05.2024	IP (Internetworking Protocol), ICMP, BOOTP, DHCP
13	14.05.2024	2. Ara Sınav
14	21.05.2024	UDP (User Datagram Protocol), TCP (Transmisson Control Protocol)

# LAN - Local Area Networks

- Multi-point mode
- Basic models:
  - Ethernet - IEEE 802
  - Token Bus - IEEE 802
  - Token Ring - IEEE 802
  - FDDI/CDDI (Fiber/Copper Distributed Data Interface) - ANSI
  - WLAN (Wireless LAN) - IEEE 802
- Data Link Layer is consist of HDLC
- 3 types of Media Access:
  - Fixed Based
    - TDMA, FDMA veya CDMA (Time/Frequency/Code Division Multiple Access)
  - Contention Based
    - Aloha, CMSA
  - Token/Reservation Based
    - Token Ring

# IEEE 802 Project

- LANs
  - 802.3 Ethernet
  - 802.4 Token Bus
  - 802.5 Token Ring
- Wireless LANs
  - 802.11 Wi-Fi
- Wireless PANs
  - 802.15 WPAN
  - 802.15.1 BlueTooth
  - 802.15.4 Zigbee
- WANs
  - 802.16 Wi-Max

# IEEE 802 Project - Con't

- to ensure compatibility between protocols used in LANs
- MAC (Media Access Control)
- LLC (Logical Link Control)
  - Un-ack connectionless service
  - Connection mode service
  - Ack connectionless service
- PDU (Protocol Data Unit)
  - in LLC
  - DSAP (Destination Service Access Point)
  - SSAP (Source Service Access Point)
  - Control Field
  - Information Field

DSAP	SSAP	Control	Information
------	------	---------	-------------

Other Layers					Other Layers
802.1 Internetworking					Network Layer
802.2 LLC					Data Link Layer
802.3 CSMA/CD	802.4 Token Bus		802.5 Token Ring		
802.3 Physical	802.4 Physical		802.5 Physical		Physical Layer

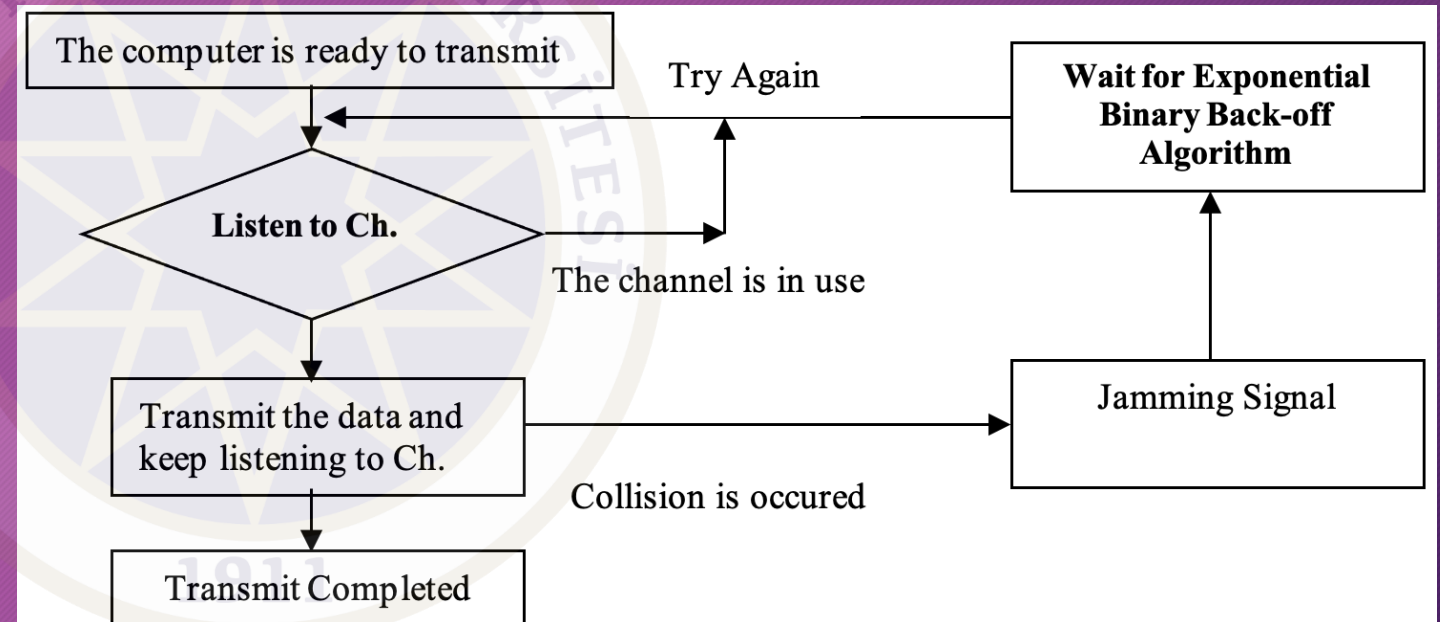

# IEEE 802.3 Ethernet

- 1972
- Xerox Corp.
- Aloha
  - Bob Metcalfe
  - 1973
  - Hawaii Islands
    - Radio network
  - Collision?
  - Utility Rate: 18%
- Slotted Aloha
  - Utility Rate: 37%

# CSMA (Carrier Sense Multiple Access)

- The goal is to improve the Slotted Aloha.
- Nonpersistent CSMA
- 1-Persistent CSMA
- p-Persistent CSMA
- CSMA/CD (Collision Detect)

# IEEE 802.3 Ethernet - Framing

7 byte	1byte	2-6 byte	2-6 byte	2 byte	46-1500	4byte
Preamble	SFD	Dest.Addr	Src.Addr.	Length	Data. Unit	CRC

- Preamble: 10101010
  - for sync.
- SFD (Start of Frame Delimiter): 10101011
- Shared and Switched Ethernet

# IEEE 802.3 Ethernet Variations

- **IEEE 802.3u - IEEE 802.3y - Fast Ethernet**
  - 10 Mbps -> 100 Mbps
  - Auto Negotiation
- **IEEE 802.3z - IEEE 802.3ab Gigabit Ethernet**
  - Cat5/5e/6/7/8
  - 100 Mbps -> 1000 Mbps
  - Auto Negotiation
- **IEEE 802.3ae - IEEE 802.3ak - IEEE 802.3an - IEEE 802.3aq - 10 GigE**
  - 1 Gbps -> 10 Gbps
- **IEEE 802.3ba - 40/100G Ethernet**
  - 40-100 Gbps

# Metro Ethernet, *Power over Ethernet (PoE)*

BLM3051  
Data  
Communication  
and Computer  
Network - 6

# IEEE 802.4-Token Bus

- In worst case scenarios, some computers seem to wait too long to transmit.
  - General Motors
  - 1980s
- Bus and Tree Topology
- Each computer recognizes the computers on its right and left.
- After the logical ring is established, the computer with the highest number will transmit
- Gives the control frame (Token) to its neighbor
- Collision is impossible
- New computers can be added or removed.
- IEEE 802.4 MAC protocol is quite complex
  - Each computer included in the system must keep up to 10 different time information and
  - Evaluate approximately 24 status information.
- 75Ω Coaxial Cable
- 3 Different Modulation Techniques are used
  - Phase continuous frequency shift keying
  - Phase coherent frequency shift keying
  - Multilevel duobinary amplitude modulated shift keying
- Max speeds: 1,5 ve 10 Mbps

# IEEE 802.4-Token Bus - Framing

- SD: Starting Delimiter
- FC: Frame Control
- ED: Ending Delimiter
- Frame size is almost 5 times bigger than 802.3.
- Priority mechanism:
  - 4 levels priority: 0, 2, 4, 6

1 byte	1byte	1byte	2-6 byte	2-6 byte	0-8182	4byte.	1byte
Preamble	SD	FC	Dest.Addr	Src.Addr.	Data. Unit	CRC	ED

# IEEE 802.5-Token Ring

- It uses a technique based on the principle that the computers to be **transmitted send their data sequentially**.
- Token size: 3 bytes (**even if the line is empty**)
- Token Re-Sizing
- Physical Length of a Bit
- Example:      Transmission speed:      R Mbps
- Bit extraction rate:       $1/R \mu\text{sec}$
- Signal propagation rate:      SP m/ $\mu\text{sec}$
- Every bit occupies on ring:      SP/R m
- What is the number of bits (b) that can be simultaneously on an L-meter ring?
- $b = L * R / SP$

# IEEE 802.5-Token Ring - Priority and Reservation

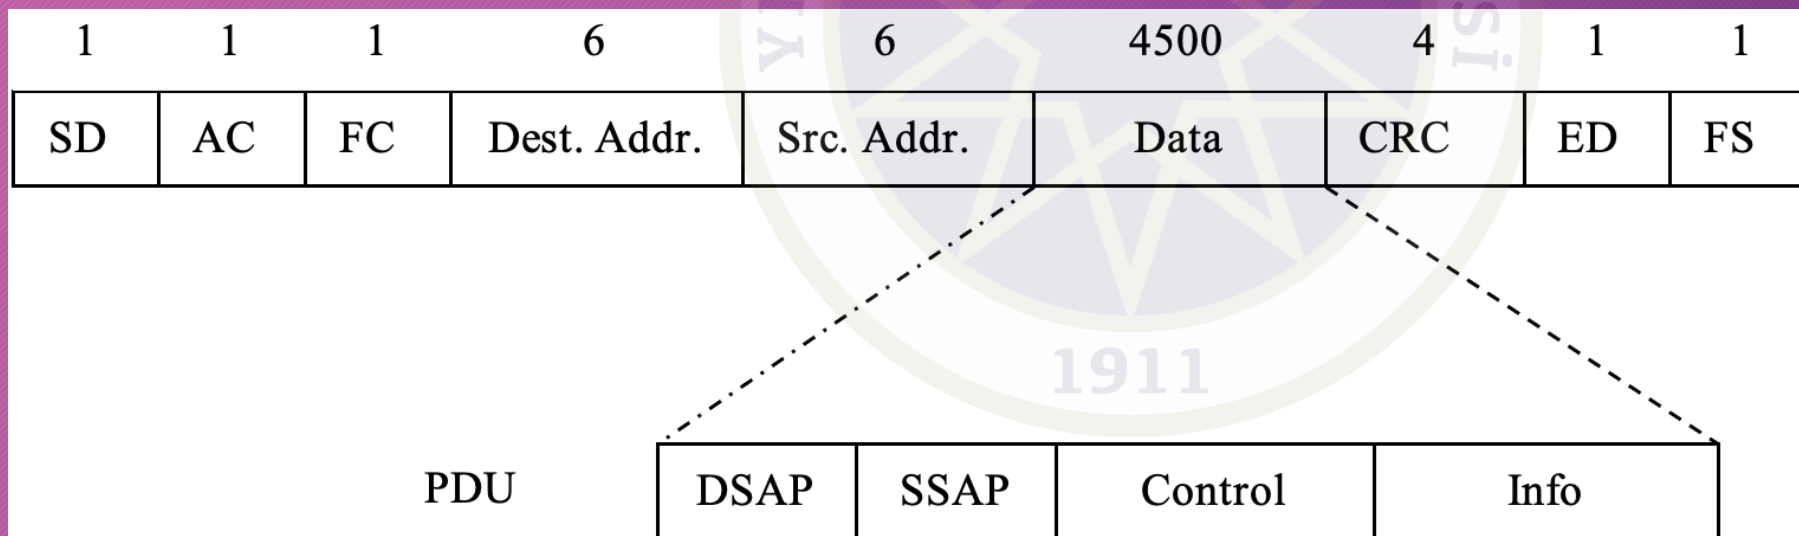

- For reservation: AC (Access Control) is used.
- Time Limitation
- Monitor Station
  - No Token Frame
  - Orphan Frame

# IEEE 802.5-Token Ring - Framing

- NIC (Network Interface Card) Addresses (6-byte)
- Differential Manchester Coding
- Max speeds are 4 and 16 Mbps (**IEEE 802.5t: 100 Mbps, IEEE 802.5v: 1 Gbps**)
- First sending bit is MSB (different from 802.3 and 802.4)

# FDDI (Fiber Distributed Data Interface)

- ANSI and ITU-U standart
- Fiber optics: 100 Mbps
- Token
- S-Frame (Synchronous Frame) - priority
- A-Frame (Asynchronous Frame)
- Timing Register
  - SA (Synch. Allocation)
  - TTRT (Target Token Rotation Time)
  - AMT (Absolute Maximum Time)
- TRT (Token Rotation Timer)
- THT (Token Holding Time)

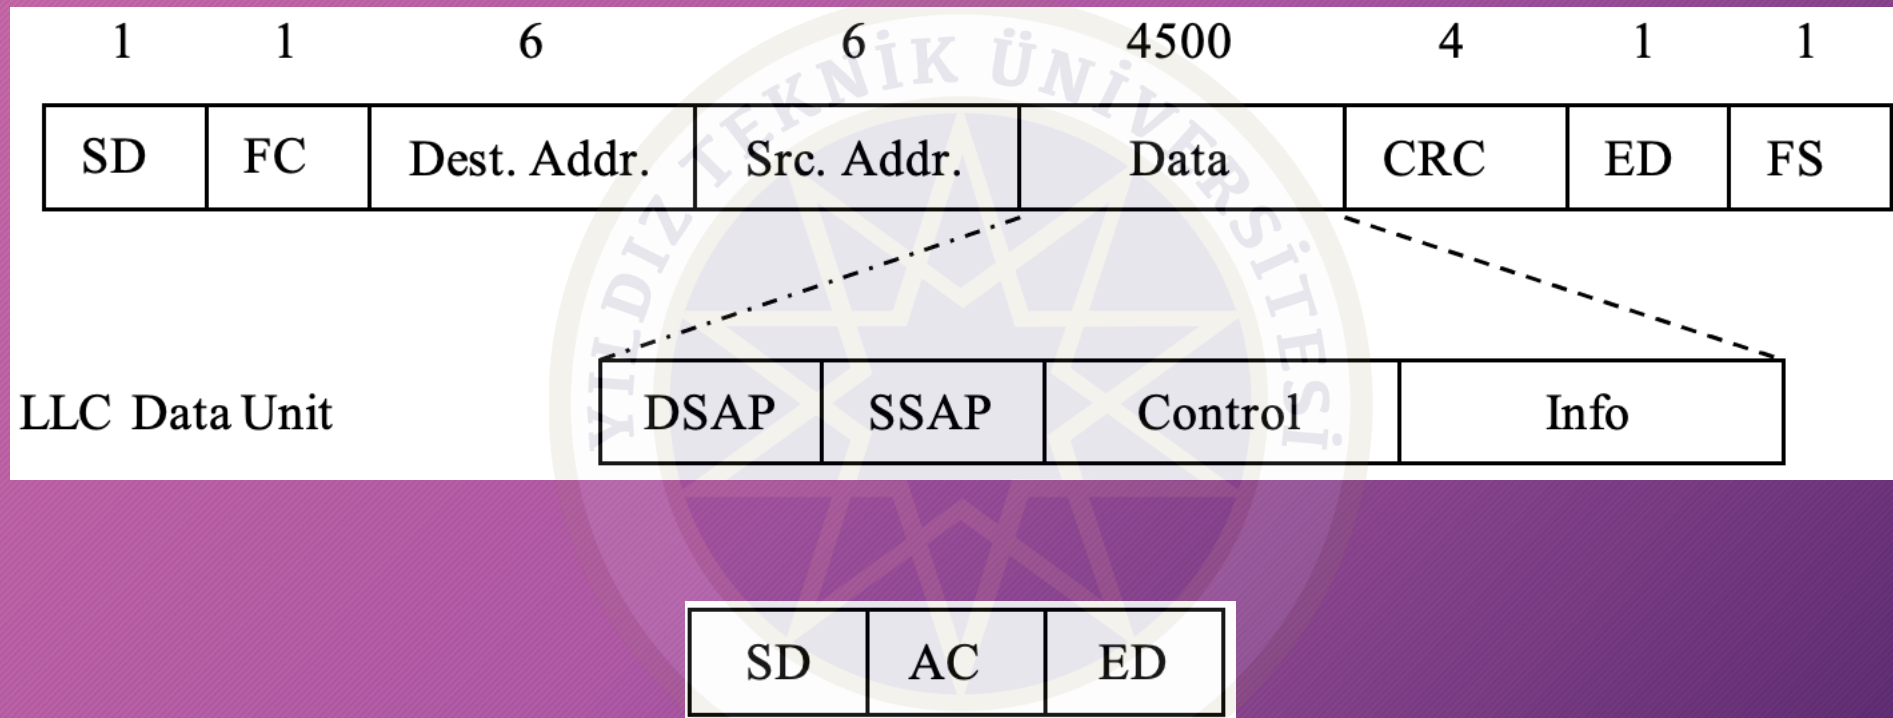

# FDDI (Fiber Distributed Data Interface) - Con't

- 4B/5B Coding
  - Using NRZ-I

5 Bit	Explanation
00000	Q (Quit)
11111	I (Idle)
00100	H (Halt)
11000	J (Used as a starting marker)
10001	K (Used as a starting marker)
01101	T (Used as a ending marker)
11001	S (Set)
00111	R (Reset)

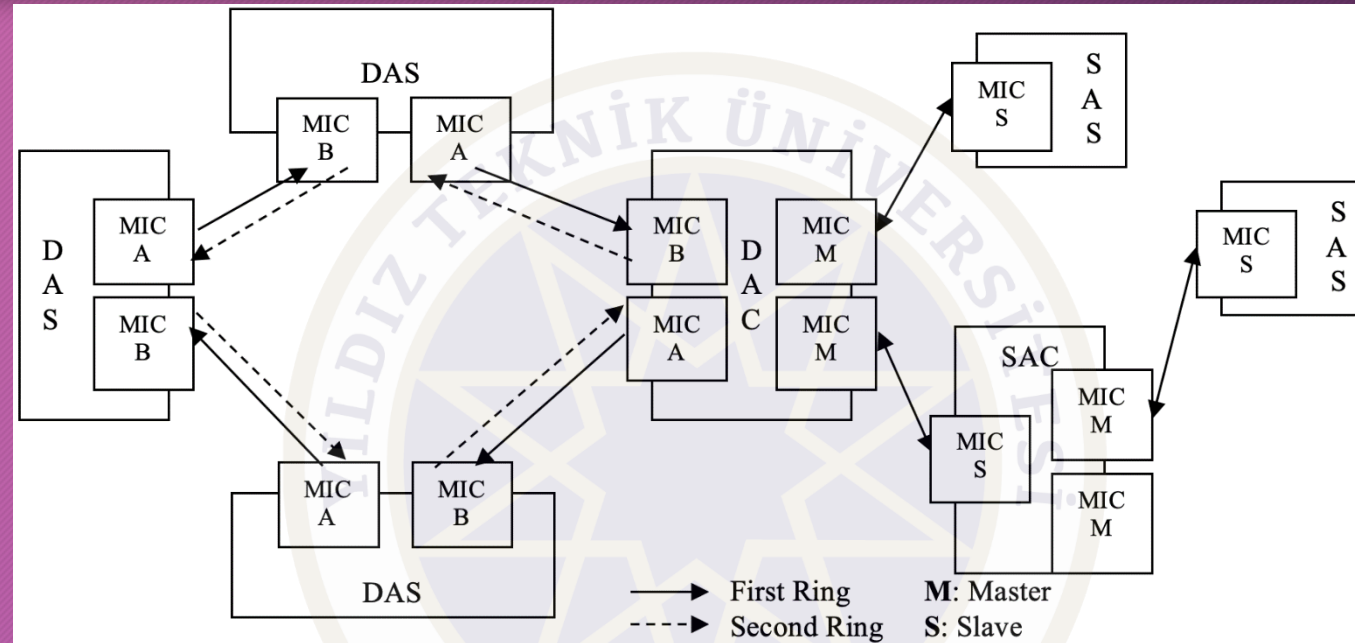

4 Bit	5 Bit	4 Bit	5 Bit
0000	11110	1000	10010
0001	01001	1001	10011
0010	10100	1010	10110
0011	10101	1011	10111
0100	01010	1100	11010
0101	01011	1101	11011
0110	01110	1110	11100
0111	01111	1111	11101

# FDDI - Framing

# FDDI - Mechanism

# IEEE 802.11 - WiFi

- RF
- Infrared
- Static
- Mobile, Nomadic
  - Roaming
- Carrier
- Non-Line-of-Sight Propagation (NLSP)

# IEEE 802.11 - WiFi - Con't

- Continuation of the Ethernet
- CSMA/CD -> CSMA/CA (Carrier Sense Multiple Access/Collision Avoidance)
  - Antenna type: half-duplex
  - Fading
    - The signal decreases inversely with the square of the distance
  - Noise
  - Detecting collisions is almost impossible
- IEEE 802.11 MAC
  - DCF (Distributed Coordination Function)
    - CSMA/CA
  - PCF (Point Coordination Function)
    - Polling

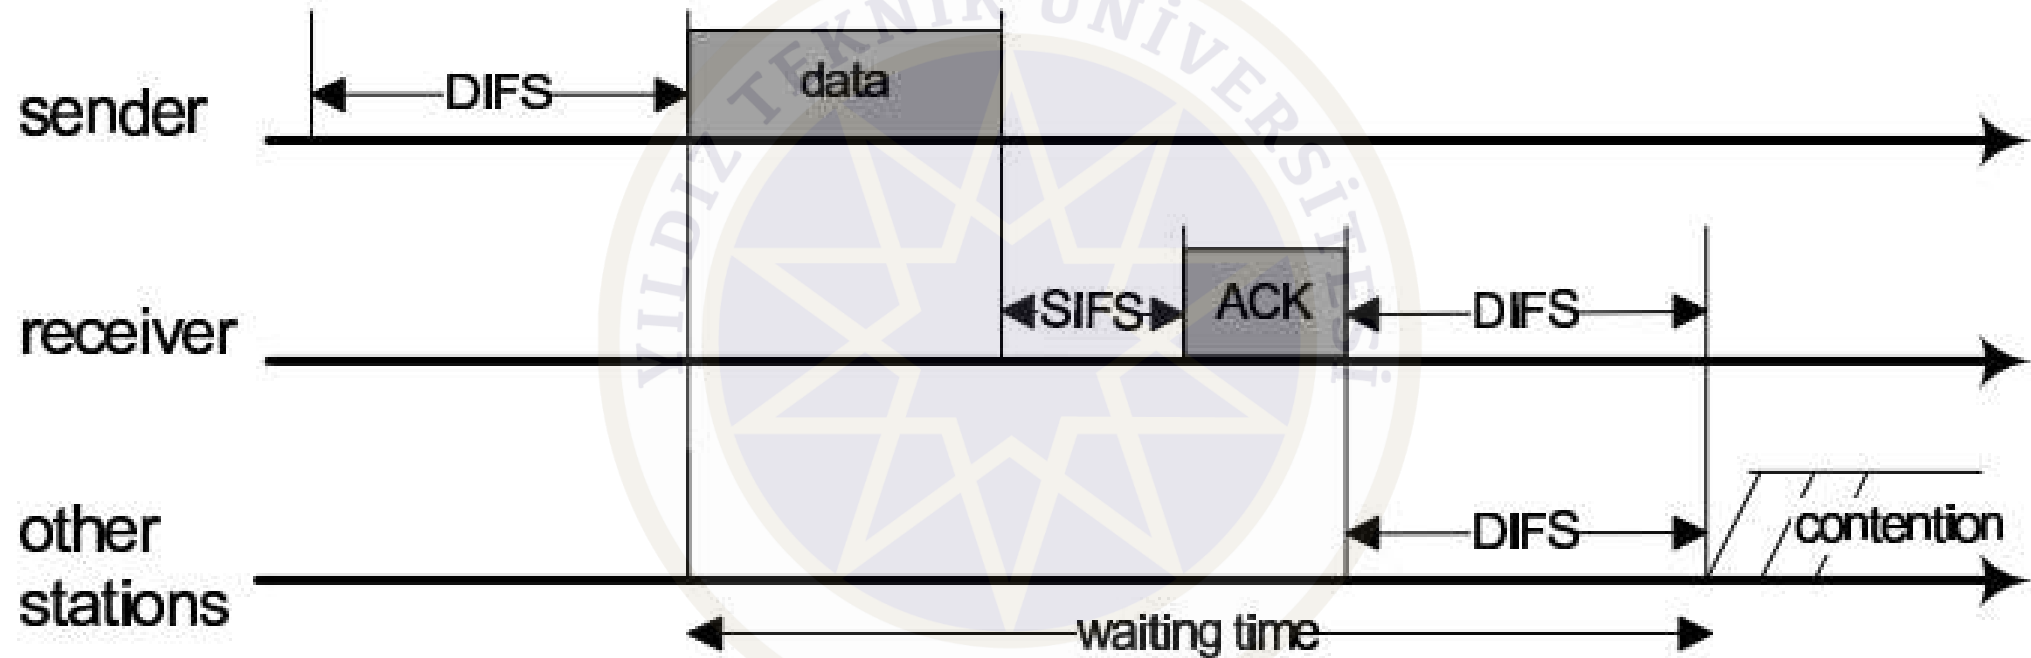

# IEEE 802.11 - DCF-Distributed Coordination Function

- DCF basic access method
  - Checks if the line is empty
  - If it sees that the line is empty for DIFS (DCF Inter-Frame Space) time, it switches to transmission.
  - If the line is busy, it delays its own transmission until the transmission is finished.
    - Waits until DIFS (back-off) times is up
  - The back-off timer starts to decrease (DIFS)
  - It transmits when the back-off time value is 0.
  - Timing slots
  - Receiving node sends acknowledgment (ACK) after waiting the time specified by SIFS (Short Inter Frame Space).
    - $SIFS < DIFS$
  - In case a collision;
    - EIFS (Extended Inter Frame Space)

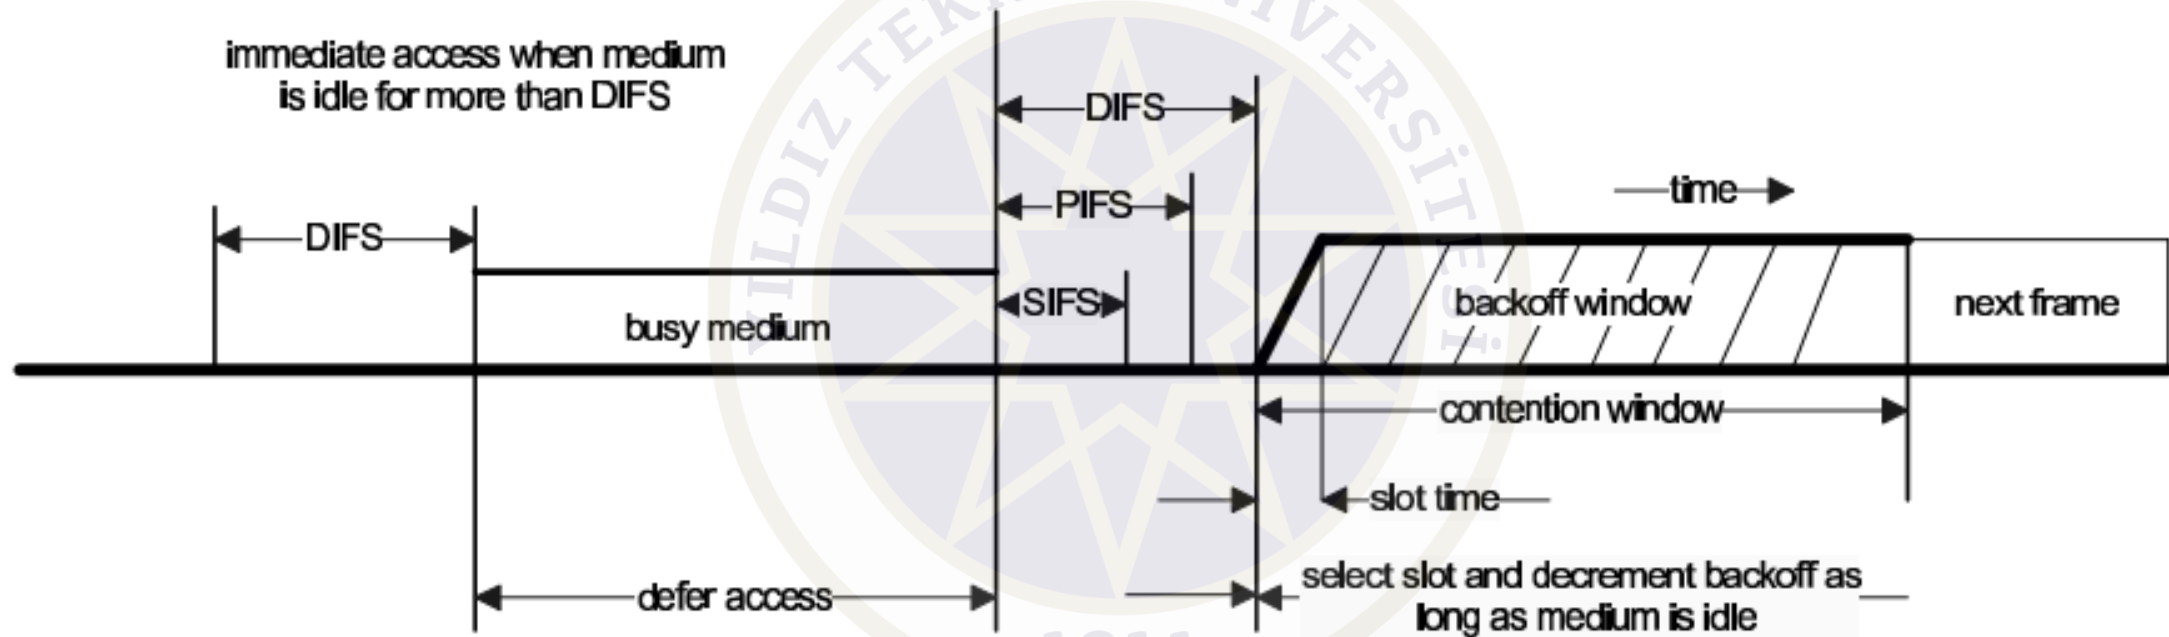

# IEEE 802.11 - DCF-Distributed Coordination Function - Con't

# IEEE 802.11 - DCF-Distributed Coordination Function - Con't

- RTS (Request To Send) / CTS (Clear To Send)
  - NAV (Network Allocation Vector)
- Hidden Node
- Exposed Node

# Service Area

- BSA - Basic Service Area
- ESA - Extended Service Area

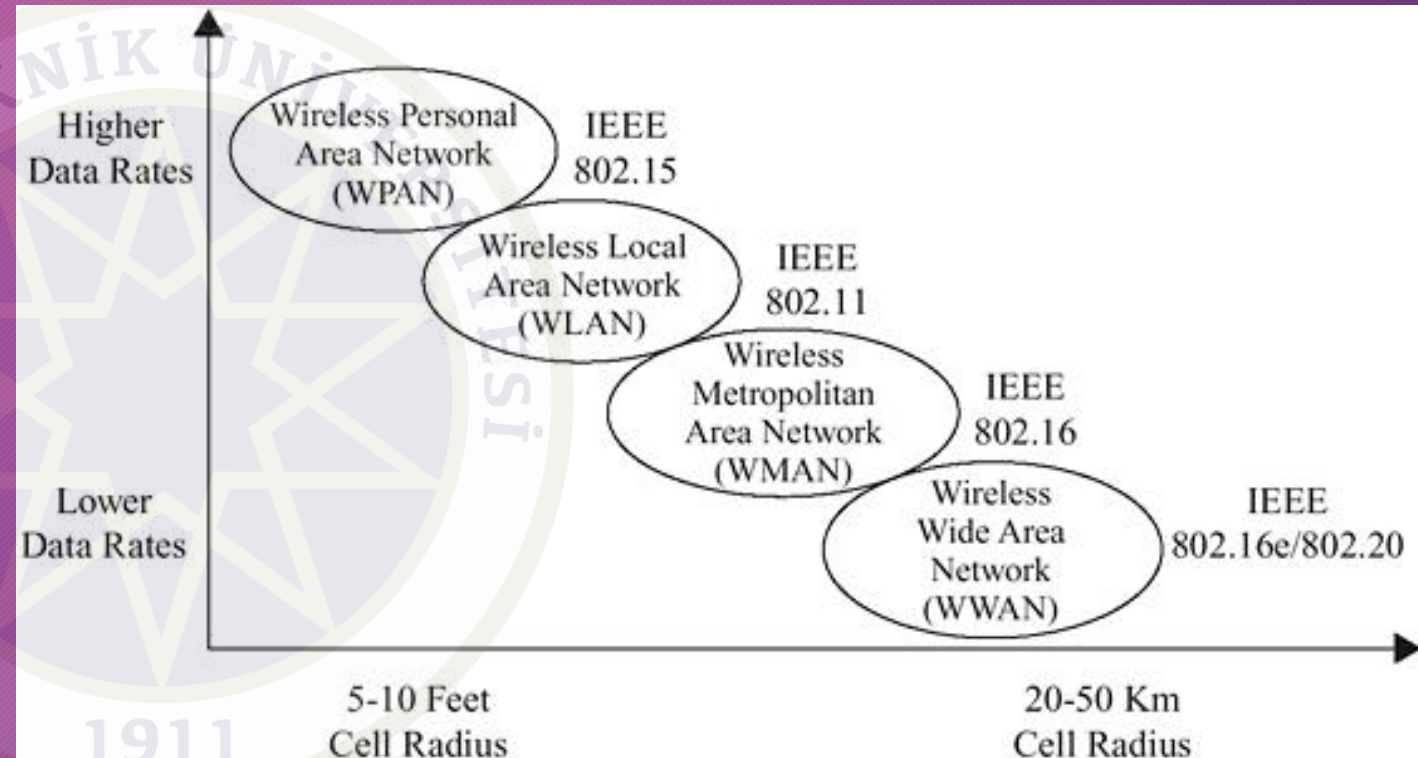

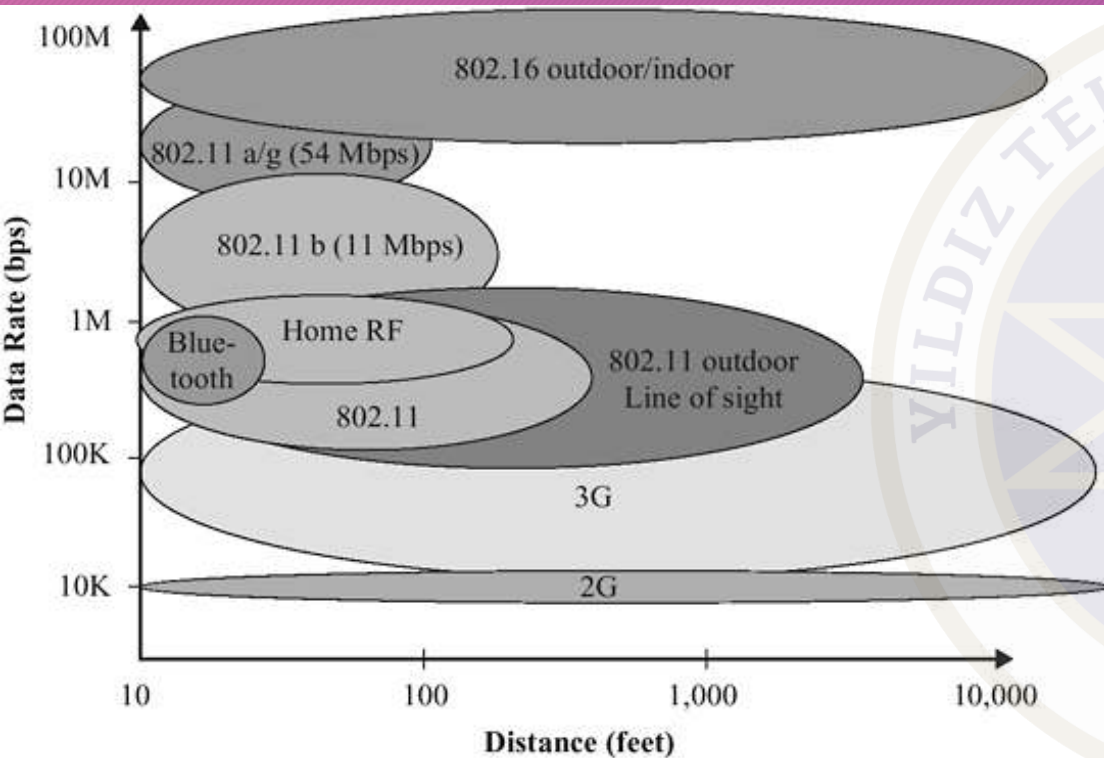

# Channel Usage

Standart	Bant Geniřlięi	Veri Hızı	Mod�lasyon	�rt�şmeyen Kanal	İ� Ortam	Dıř Ortam
IEEE 802.11	20 MHz	$\leq 2\text{Mbps @ } 2.4\text{GHz}$	FHSS, DSSS		20m	100m
IEEE 802.11a	20 MHz	$\leq 54\text{Mbps @ } 5\text{GHz}$	OFDM	11	35m	120m
IEEE 802.11b	20 MHz	$\leq 11\text{Mbps @ } 2.4\text{GHz}$	DSSS (CCK)	3	35m	140m
IEEE 802.11g	20 MHz	$\leq 54\text{Mbps @ } 2.4\text{GHz}$	OFDM (>20Mbps) DSSS (<20Mbps)	3	38m	140m
IEEE 802.11n	20 MHz 40 MHz	$\leq 72\text{Mbps @ } 2.4\text{GHz}$ $\leq 150\text{Mbps @ } 5\text{GHz}$	OFDM (MIMO – 4 stream)	3/11	70m	250m
IEEE 802.11ac	20 MHz 40 MHz 80 MHz 1600 MHz	$\leq 87.6\text{Mbps @ } 5\text{GHz}$ $\leq 200\text{Mbps @ } 5\text{GHz}$ $\leq 433\text{Mbps @ } 5\text{GHz}$ $\leq 866\text{Mbps @ } 5\text{GHz}$	OFDM (MIMO – 8 stream)			
Bluetooth	Ver 3.0	$\leq 24\text{Mbps @ } 2.4\text{GHz}$	FHSS	79		100m
HomeRF		$\leq 10\text{Mbps @ } 2.4\text{GHz}$	FHSS			
HiperLAN/1		$\leq 20\text{Mbps @ } 5\text{GHz}$	CSMA/CA			
HiperLAN/2		$\leq 54\text{Mbps @ } 5\text{GHz}$	OFDM			

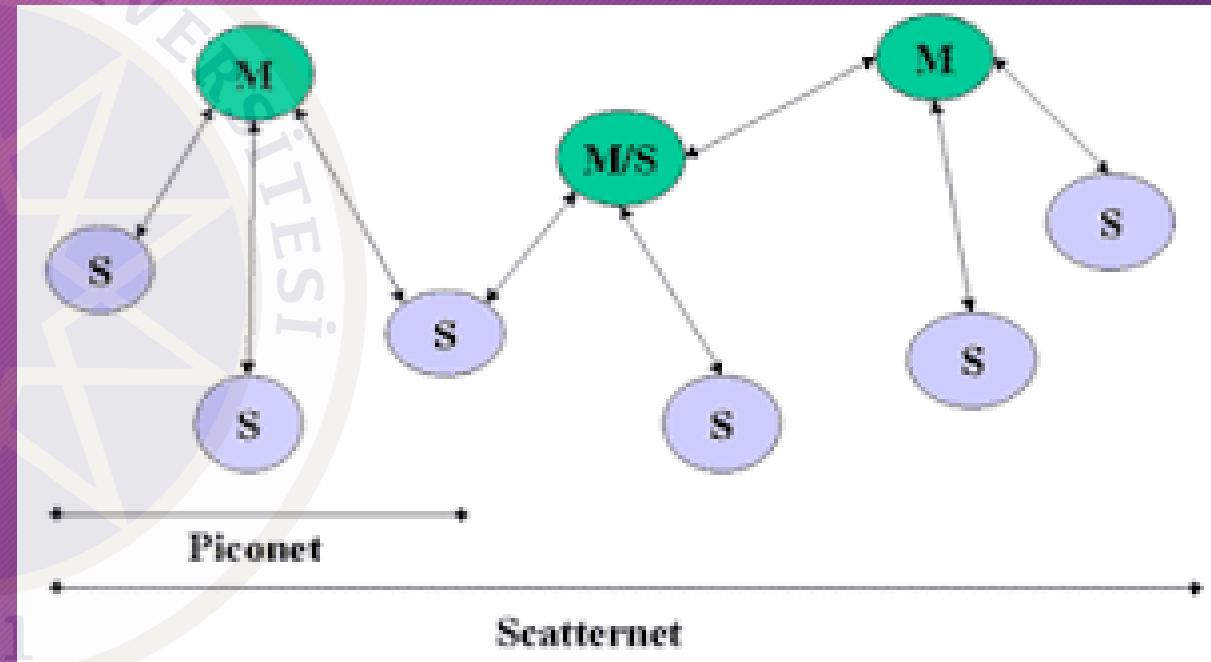

# Channel Usage - Con't

# Other WiFi Standarts

- **BT (Bluetooth) - IEEE 802.15.1**
  - 1994
  - Ericsson
  - Bluetooth Special Interest Group (SIG)
  - 2.45 GHz (2.402-2.480 GHz)
  - SSFH (Spread-Spectrum Frequency Hopping)
  - 10-100m
  - 24 Mbps
- Piconet
- Scatternet
- Zigbee - IEEE 802.15.4
- HomeRF
- HiperLAN

# Threats for Wireless Networks

- Eavesdropping
- Unauthorized Access
  - Intruder
    - Sending message
    - Receiving message
    - Changing message
    - Forging message
  - Compromised
  - Authentication
    - Credential
    - Intrusion detection
- Interference, Jamming
  - Denial of service attack
- Physical threats

# Security in Wireless Networks

- Authentication
- Encryption
- Security types
  - Wired Equivalent Privacy (WEP)
    - Encryption only for data, not for header
    - RC4
    - Encryption key is too weak.
  - Wi-Fi Protected Access (WPA)
    - $\geq 2003$
    - Temporal Key Integrity Protocol (TKIP)
      - Authentication
    - WPA2 (2010)
      - Advanced Encryption Standard (AES)
      - Extensible Authentication Protocol (EAP)
    - 2008 -> TKIP is unreliable

802.3 Ethernet	<ul style="list-style-type: none"> <li>+ Yaygın kullanım, sahip olunmuş deneyim</li> <li>+ Basit algoritma</li> <li>+ Basit kurulum. Yıldız ilingesinde yeni bir bilgisayar eklemek ağıın çalışmasını etkilemez.</li> <li>+ Sayısal işaretleşme (Manchester) LSB öncelikli veri iletimi</li> <li>+ Düşük yüklerde gecikme sıfıra yakındır</li> </ul>
